Kea Conservation Trust - Winter Advocacy Tour 2012

(Report written by Tamsin Orr-Walker (Project Coordinator))

Funded by:

Federated Mountain Clubs NZ (\$4,000)

Background

The winter advocacy tour, now a separate entity, was originally a much smaller part of the KCT kea winter survey which ran every July between 2008-2011. The Advocacy tour was developed solely as a method to connect with key stakeholders in key areas throughout the south island1 week – 10 days prior to highlight the winter kea survey. Over the years, due to increasing interest from the public, the advocacy tour was extended to include a number of talks on kea, the issues facing the species and the role of communities and stakeholders in collaboration with the KCT, in protecting this species.

The Winter kea survey was discontinued in 2011 however the list of talks delivered during the advocacy portion of the tour continued to steadily increase with demand driving the number of locations and numbers of people attending talks.

In 2009, the first year that the talks were given, 2 presentations were delivered (1 school and 1 public talk) with a total of 27 people attending.

In 2010, 7 talks were delivered (1 school and 6 public talks) with 125 people in attendance.

In 2011, 13 talks were presented (5 school and 8 public talks) over a 10 day period resulting in 270 people attending (139 adults and 131 children). An additional 4 stakeholder meetings were also conducted throughout the tour with 2 potential sponsors and 2 DOC conservancies.

This year 790 people attended 21 talks across the 10 day period (333 adults and 457 children) and a total of 8 meetings and 5 media interviews were also conducted.

Talk Details

The winter advocacy tour has now become an entity in itself and this year was conducted between the period 26 June – 6 July 2011. Dr Lorne Roberts and Tamsin Orr-Walker (Trust Chair) spoke at a number of public venues during this time which also provided the opportunity for public discussion. These were hosted by the following groups in the following locations:

Date	Location 2012	Host/Venue	Adult numbers	Child numbers
26 June	Christchurch	F&B	10	0
26 June	Christchurch	Limited School	1	6
26 June	Christchurch	Avonside School	3	17
27 June	Carew	Carew Peel forest School	6	73
27 June	Fairlie	St Joseph's School	3	47
27 June	Twizel	DOC	9	2
28 June	Twizel	Twizel School	3	37
28 June	Mt Cook	Mt Cook school	4	5
28 June	Dunedin	Roslyn Kea Scouts	6	14
28 June	Dunedin	FMC – Alpine Club NZ	26	0
29 June	Te Anau	Te Anau primary school	9	200
29 June	Te Anau	Fiordland College	8	42
29 June	Te Anau	Te Anau DOC	22	2
1 July	Queenstown	Kiwi Birdlife Park	17	0
2 July	Wanaka	DOC	40	1
3 July	Timaru	FMC – Sth Canterbury Alpine Club	36	4
4 July	Arthurs pass	DOC	8	0
5 July	Hokitika	DOC	33	1
5 July	Greymouth	DOC	24	6
6 July	Nelson	Forest & Bird	65	0
	Totals	21	333	457
		·	790	

All community talks were a minimum of 2 hours in duration (including discussion afterwards) whilst school talks were each at least 1 hour. Including set up and travel time this resulted in over 75 hrs hours of personnel time invested in this year's talks and 11.5 hours in meetings and media interviews.

Distance travelled: 2,813kms

Additional Meetings

A total of 9 meetings were held with Lincoln and Otago Universities, Department of Conservation (Arthurs Pass, Hokitika and Nelson), Kiwibirdlife Park and Natureland in Nelson.

Promotion and media

A large number of emails were sent prior to the advocacy tour to schools (33 in total), past hosts, press, DOC VC and AO's, Otago and Lincoln Universities, Forest & Bird and Federated Mountain Clubs, NZ. A total of 158 email responses were sent by the Project Coordinator during this time.

A total of 5 media interviews were generated which substantially increased our profile during the tour. Two radio interviews were conducted (including Breakfast with Spanky (ChCh)) and at least three newspaper articles written by the Wanaka Sun, The Timaru Herald and Twizel (refer to the appendix for details).

Additionally, the tour was also promoted on the following websites: Kea Conservation Trust, Federated Mountain Clubs (NZ), NZ Alpine Club, Department of Conservation and Forest & Bird.

Costs and Funding Partners:

\$4,000	Federated Mountain Clubs
\$3,025.14	Kea Conservation Trust
\$2,400	Unitec, NZ (In-kind support)

Summary

The tour was a resounding success with 2.5 times more people than in 2011 attending over 1.5 x the number of talks in the same period. Email feedback received after the talks, continues to be very positive with many of these enquiring about membership or offering to volunteer their time.

Our relationships with groups such as DOC, F&B, FMC and Otago and Lincoln Universities has also been strengthened. More interest has also been generated on our Facebook page which at the start of the tour had 415 likes (after 22 months since its inception) and a further 1 month later – between the period 25 June – 26 July 2012, a further 200 likes were generated.

The Timaru Herald

Kea treading along an endangered path

RHONDA MARKBY 04/07/2012

There are as few kea left in the world as there are tigers, and think how much is being spent on saving tigers. That's the message from the Kea Conservation Fund when it comes to the future of New Zealand's native parrot.

Trust chairwoman Tamsin Orr-Walker and scientific adviser Lorne Roberts discussed their work last night in Timaru at a New Zealand Alpine Club meeting.

The kea population stood at between 1000 and 5000 but research on four separate populations indicated numbers were decreasing.

BIRD STUDY: Kea Conservation Trust chairwoman Tamsin Orr-Walker and scientific adviser Lorne Roberts tag a kea.

In the 1990s 11 breeding pairs were rearing 10 chicks a year in a 7000-hectare area of the Nelson Lakes. Ten years later that area was checked twice and only three pairs were found. Those birds were raising two chicks annually. While the actual number of birds in the wild was unknown, Ms Orr-Walker said people frequently said they weren't seeing as many kea as they had in the past. The age of the birds was also a concern. Whereas they should live to about 30, many were dying when only four or five years old.

Decrease in numbers appeared to be the result of several factors including lead poisoning (from eating the lead off nails in high country huts), degraded environment and predation from stoats and possums. "It would be such a tragedy if we lost them, they are so charismatic," Ms Orr-Walker said.

The trust was working on several projects it hoped would help protect kea, including a bird repellent to be included in all 1080 poison. A farmer near Queenstown was working with the trust, trialling a spray that should keep the birds away from sheep. The kea can smell the compound and when they ingest the material they feel sick. Dr Roberts hoped the birds would come to associate the smell with becoming unwell, and stay away from the flock.

The birds' intelligence can be their undoing. A Conservation Department worker spent days laying 200 stoat traps in the remote Murchison Valley, as stoats are a major predator of young kea. The keas always remained some distance behind him. It was only when all the traps were set that he realised what the birds had been doing – using a stick to set them off.

Twizel Update

Welcome to issue 392 **To clever for their own good!**

Only a few people took the opportunity to go along to the Kea Conservation Trust (KCT) presentation on Wednesday evening last week. Those that did were given a rather bleak picture of the state of the Kea. There are possibly as few as 1000 birds left in the wild and they appear to be dwindling at a rapid rate.

There are many factors that contribute to this demise. Some even think that a change in the habitat by the shutting up of the high country may be contributing to this?

Certainly those present were shown evidence of the effect that predators are having.

Tamsin Orr- Walker from KCT addresses the small but interest audience at Hunters Cafe and Bar

Cameras positioned around nests showed a stoat attacking a young bird on the nest taking up to 1.5 hours to make its kill. More surprising was the sight of a possum entering a nest and eating a young Kea in front of the parent bird.

There is also a by-kill from trapping and poisoning operations. The Kea's natural curious and intelligent nature gets them into some trouble here. They have been reported to be following pest controllers and then helping themselves to the baits or coming off second best with traps! The KCT does not suggest 1080 operations should stop on the contraire they believe that these predators have to be dealt too.

To this end they have been trialling repellents to mix with poison baits and are now confident they have something that will work and this should go into production in the near future. They are taking this a step further and now have trials underway to ascertain if this can also be used to dissuade Kea from attacking sheep. Maybe even a spray to keep your car safe from attack in the future?

The problems with lead poisoning have been well documented and efforts continue to replace lead on high country buildings.

The trust has also been concerned about the conditions that captive Kea is being kept under in zoos around the world. Many don't understand the high intelligence of the Kea and the need for stimulation.

KCT is very keen to get local communities involved in finding out more about this iconic bird that is endemic to the South Island High Country.

They are keen to hear from tamper's, hunters or anyone who is out in the high country and have sightings of the Kea.

Or maybe you would like to show your support by donating or offering your services to the trust. Tamsin Orr-Walker Chairman can be contacted at E-mail <u>info@keaconservation.co.nz</u> Web; www.<u>keaconservation.co.nz</u>
